

Fallen Angels FOOLS Memorial Training Weekend

September 17 and 18, 2011

Note: We have changed our program offering

Operations in Large and Complex Structures

This program will focus on firefighters searching for life, fire or downed firefighter(s) in a complex/large area occupancy. Firefighters must have a search procedure in place allowing them to simplify this low frequency, extremely high risk event. With the use of a thermal imaging camera and search line, firefighters will be able to search complex/large area occupancies safer, quicker and more effectively. A fire in a commercial building can be difficult and fast spreading. Whether it's in a family business in rural America or a mega mall in a big city, one thing is for sure, the fire will be manpower intensive and very dangerous. Multi-company operations are a part of this program.

This program is appropriate for Firefighters, Company Officers and Chief Officers.

To register email Training@TaskForce1.net

Only \$195 per student.

Class size is limited.
